#### Abstract

The 2013 Australian Election Study (au.edu.anu.ada.ddi.01259) is the tenth in a series of surveys beginning in 1987 that have been timed to coincide with Australian Federal Elections. The series also builds on the 1967, 1969 and 1979 Australian Political Attitudes Surveys. The Australian Election Studies aim to provide a long-term perspective on stability and change in the political attitudes and behaviour of the Australian electorate, and investigate the changing social bases of Australian politics as the economy and society modernise and change character. In addition to these long-term goals, they examine the political issues prevalent in the current election and assess their importance for the election result.

The 2013 survey replicates many questions from the previous Australian Election Studies, but also introduces new questions regarding immigrants to Australia. Other sections cover the respondent's interest in the election campaign and politics, their past and present political affiliation, evaluation of parties and candidates, alignment with parties on various election issues, evaluation of the current economic situation, and attitudes to a range of election issues including global warming, taxation, education, unemployment, health and Medicare, refugees and asylum seekers, and population policy. Opinions on social policy issues including abortion, equal opportunities, same sex marriages, and Australia's security were also covered in the 2013 Australian Election Study.

Background variables include level of education, employment status, occupation, type of employer, position at workplace, trade union membership, sex, age, own and parents' country of birth, parents' political preferences, religion, marital status, income, and where applicable, the occupation, trade union membership and political preference of the respondent's partner.

The 2013 Australian Election Study is the second in the AES series to provide the option of completing the questionnaire online via a unique password, or via hardcopy. 576 of the 3,955 responses (14.6 percent) were completed online.

This data file is also supplemented with division level election results from the Australian Electoral Commission election results website (http://www.aec.gov.au/Elections/Federal\_Elections/2013/index.htm). These variables are found under the variable group "AEC Election Results". Information on the source of these election results and the method by which they were created is available in a Stata \*.do syntax file located in the other study materials section.results and the method by which they were created is available in a Stata \*.do syntax file located in the other study materials section.

### **Sampling**

### **Sampling Procedure**

One-stage stratified or systematic random sample

See Technical Report for further details

### **Deviations from Sample Design**

None

#### **Response Rate**

Of a total mailing of 12,200, there were 3,955 completed returns - with 3,379 mail returns and 576 online returns - giving a raw response rate of 32.4 percent. An adjusted response rate of 34.2 percent was calculated by removing the Out of Scope sample (deceased, incapable, return to sender, n=530).

### Weighting

Data was weighted by: Sex, Age and State (based on AEC enrolment data for the 2013 election) and party vote (based on AEC final election vote tallies). See Appendix A4 of the Technical Report for further details.

#### 1. Follow-up mail-outs

One week after the initial mail out, a reminder / thank you card was sent to all respondents, excluding those that had opted out of the survey (n=12,145). Approximately two weeks after this, the Social Research Centre downloaded a list of completed surveys from the online survey provider, and along with Datatime Services, determined all records that remained incomplete. A reminder survey booklet was then mailed on 4th October to 9,057 respondents. A reminder letter was then sent on 11th October to participants who had yet to respond (n=8,728), followed by a second and final reminder letter to all remaining non-respondents on 1 November (n=7,276).

#### 2. Survey Helpline

A survey helpline, including an 1800 number and email address was printed on all survey materials to give sample members the opportunity to seek clarification or ask for assistance regarding any survey matters. This included, but was not limited help establishing survey bona fides, encourage response and record opt-outs to the survey.

The 1800 number and email address were operational from September 6 until the end of the fieldwork period. All calls to the 1800 number not answered in real time (all operators currently busy or the call was received outside hours of operation) were routed to a messaging service and returned within 24 hours. All emails were also responded to within a 24 hour period, unless received over the weekend.

The 1800 number operators were fully briefed on survey background and procedures, the administration of the survey, and response maximisation techniques.

#### 3. Telephone follow-up

Approximately one-third of the way through fieldwork, it was agreed that a telephone follow up would be conducted to try and maximise response to the Candidates survey. A total of 394 records were included as part of the follow up activity.

### **Data Processing & Appraisal**

#### **Data Editing**

The data was checked for out of range codes and that the skip patterns were followed. In consultation with the principal investigators, cleaning rules were developed for interpreting multiple responses for single response questions. Coding rules were also developed in consultation with the Principal Investigator where required. See Technical Report for further details.
